Fostering a Positive Learning Environment
(School Policy on Mobile Phones)

Dear Parent,

Despite repeated instructions regarding the strict policy prohibiting mobile phones, there have been incidents of students bringing the same to school.

It is emphasized and reminded once again that mobile devices or any other such gadgets found in possession by your ward shall be confiscated with a fine of Rs 2000/- and will not be returned.

CBSE has also banned the use of mobile phones in school.

Please educate your ward regarding the responsible use of mobile phones and refrain from sending them with the mobile phone to school.

We appreciate your understanding and cooperation in this matter as we continue our efforts to provide the best possible learning environment for our students.

Fostering a Positive Learning Environment (Prohibition of Mobile Phones in School)

August 6, 2023

Dear Parent,

As you are already aware, it is against **school policy** to bring mobile devices to school. Hence, it is important for all stakeholders to adhere to this policy to promote a productive academic atmosphere. **CBSE** has also banned the use of mobile phones in school.

UNESCO, the UN's education, science, and culture agency also has advocated the ban on mobile phone use as it leads to reduced educational performance and a negative effect on children's emotional stability.

Please educate your ward regarding the responsible use of mobile phones and refrain from sending them with the mobile phone to school. Mobile devices or any other such gadgets found in possession by your ward shall be confiscated with a fine of Rs 2000/- and will not be returned.

Safety and security of our students is our prime concern, for which we earnestly seek your cooperation.

UNESCO endorses banning smartphones in schools

The Hindu Bureau
NEW DELHI

The United Nations Educational, Scientific and Cultural Organization (UNESCO) has warned against an uncritical rush toward embrace of digital products in educational settings, noting that "there is little robust evidence on digital technology's added value in education" and that "a lot of the evidence comes from those trying to sell it". It cited the example of how "Pearson funded its own studies, contesting independent analysis that showed its products had no impact". At the same time, there was ample evidence of a negative link between excessive screen time and a child's educa-

tional performance and emotional stability, it said.

The UN body's Global Education Monitoring Report, 2023, titled "Technology in education: a tool on whose terms?", has endorsed banning smartphones in schools in situations where "technology integration does not improve learning or if it worsens student well-being". It highlighted that "mere proximity to a mobile device was found to distract students and to have a negative impact on learning in 14 countries, yet less than one in four have banned smartphone use in schools". It also cited research studies to point out that "banning mobile phones from schools improves academic perfor-

Study shows that higher screen time is associated with poorer well-being and less curiosity, self-control and stability. GETTY IMAGES

mance, especially for low-performing students".

Detailing the rationale for restricting smartphone usage for children, the report cited a study of young people between the ages of two and 17 which "showed

that higher screen time was associated with poorer well-being; less curiosity, self-control and emotional stability; higher anxiety; and depression diagnoses".

The report also flagged

the higher costs of delivering basic education where there is a dependence on the setting up of digital infrastructure, and how this could worsen the problem of unequal access in low-income countries. "Technology is often bought to plug a gap, with no view to the long-term costs for national budgets. The cost of moving to basic digital learning in low-income countries and connecting all schools to the Internet in lower-middle-income countries would add 50% to their current financing gap for achieving national SDG 4 targets," the report stated.

Another major concern around the indiscriminate use of digital technology in education was children's

privacy. "Children's data are being exposed, yet only 16% of countries explicitly guarantee data privacy in education by law. One analysis found that 89% of 163 education technology products recommended during the pandemic could survey children. Further, 39 of 42 governments providing online education during the pandemic fostered uses that risked or infringed on children's rights," the report said.

Urging governments to "putting learners first" when it came to decisions on the use of digital technology, the report urged policymakers to ensure child data protection laws and accountability mechanisms tailored to children.
